Job Market Paper

“Maternity Ward Closures and Birth Outcomes” 2021.

This paper studies the impact of maternity ward closures on birth outcomes in the United States. On the one hand, maternity ward closures can affect health outcomes through an increase in travel distance, resulting in a decreased utilization of prenatal care and an increase in out-of-hospital birth. On the other hand, women may be exposed to a new set of providers with potentially better resources and different delivery practices, which could be beneficial if the new providers are of higher quality. Using national Vital Statistics data, I estimate the impacts of closures using a matched difference-in-differences design. Rural closures appear to create net

benefits: I find a large decline in Cesarean births alongside precise null effects for infant and maternal outcomes. I show that this effect is driven by low-risk women in closure counties shifting to hospitals with more judicious Cesarean practices, suggesting closure hospitals were over-performing Cesareans. By contrast, urban closures have deleterious effects. Cesareans rise (with no improvement in maternal and infant outcomes) in the hospitals that absorb the closures.

Publications (including accepted & forthcoming)

“Malaria, Race, and Inequality: Evidence from the Early 1900s U.S. South” With Faizaan Kisat. 2021. *Forthcoming at Journal of Economic History*.

This study investigates the impact of malaria eradication programs on black-white economic disparities in the early 1900s US South. Malaria eradication was widespread and improved health across races. Yet only white men experienced economic benefits. Using matched census records, we find that increased exposure to the program was associated with higher schooling attainment and income for whites, but not for blacks. Blacks exposed to malaria eradication were more likely to be farm laborers, and both blacks and whites were more likely to migrate out of state. Our findings suggest that malaria eradication, a broadly-applied intervention, widened racial gaps.

Working Papers

“The Effects of Granting Temporary Work Visas on Labor Market Outcomes of Natives and Immigrants: Evidence from DACA” 2020. *Revise and resubmit at Journal of Urban Economics*.

Deferred Action for Childhood Arrivals granted more than 900,000 temporary work permits to eligible immigrants. I estimate the impact of the policy on the labor market outcomes of natives and immigrants ineligible to take up the policy using ACS data and a continuous difference-in-differences strategy to compare individuals who are more and less exposed to the eligible population. I find that DACA does not depress labor market outcomes for natives, and possibly increases the fraction working by both drawing natives out of unemployment and into the labor force. I also find that the policy likely had no impact on ineligible immigrants.

Teaching Experience

<i>Princeton</i>	ECO 100: Introduction to Microeconomics (TA, Fall 2018, Spring 2019) ECO 313: Undergraduate Econometrics (TA, Spring 2020)
<i>Penn State</i>	ECON 102: Introductory Microeconomics (TA, Fall 2011 – Spring 2013) ECON 451: Monetary Theory (TA, Fall 2013, Spring 2014)
<i>San Antonio ISD</i>	High School Mathematics Teacher (2014-2016)

Research Experience

2017-2018	Research Assistant to Prof. Will Dobbie
2012-2014	Research Assistant to Prof. Christopher Griffin
